

Specific features of diagnostic errors in pediatrics

Stefana Cristina Alexoaie, Irina Mihaela Ciomaga - "Sf. Maria" Emergency Hospital for Children, Iasi, Romania; **Diana Veronica Costache** - Pulmonology Clinical Hospital, Iasi, Romania

March edition of *Medica Academica* magazine, 2016

At present, diagnostic errors in pediatrics are poorly explored and accepted in the everyday practice. Mistakes are difficult to be recognized by anyone, and doctors make no exception. For a pediatrician it is not enough to just have a good knowledge in pediatric pathology. In order to operate under optimum conditions, a physician must know very well the child's psychology, master every stage of its development, thus being ready to face communication issues with his little patient.
